

PHILLIPS-MEDISIZE TO PRESENT AT MF DRY POWDER INHALERS CONFERENCE

Integrated Development and Scale-up of Combination Products

Hudson, WI - June 15, 2016 - Phillips-Medisize Corporation's Chief Technology Officer, Bill Welch, will present at this week's Dry Powder Inhalers Conference in London. The Dry Powder Inhaler Conference is a key event for pharmaceutical and medical device professionals in the DPI market. The conference presents the latest technology in DPI formulation and development, along with where the DPI market is going and the innovations being applied for patient compliance.

Mr. Welch's presentation, entitled "Integrated Development and Scale-up of Combination Products," will cover smaller and smarter combination products to support the trend toward patient-administered drug delivery. Key points of the presentation will include:

- Integrating HFE and DFM/DFA as foundations of the combination product development process
- Early manufacturing involvement to speed up time-to-market and reduce risk by 'getting it right the first time'
- Development of a manufacturing scale-up strategy, concurrent with the development process

"As we continue to see the trend towards patient-administered drug delivery, it is critical the devices are useful, usable, desirable and manufacturable. In my presentation I will discuss how using an integrated product development process, combining human-centered design principles with a solid design for manufacturing philosophy, will address these items, improve the probability of success, reduce time to market and lower launch risk," comments Bill Welch, Chief Technology Officer.

The Management Forum Annual International Conference Dry Powder Inhalers is located at the Rembrandt Hotel, 11 Thurloe Place, London on June 16-17, 2016.

About Phillips-Medisize Corporation

Phillips-Medisize is a leading global outsource provider of design and manufacturing services to the drug delivery and combination products, consumable diagnostics and medical device, and specialty commercial markets. The company has annual sales of over \$650 million with 80% of the total revenue coming from drug delivery, medical device, primary pharmaceutical packaging and diagnostic products such as: disposable insulin pens, glucose meters, specialty inhalation drug delivery devices, single use surgical devices and consumable diagnostic components.

Phillips-Medisize Corporation features a list of blue chip medical device, pharmaceutical and specialty commercial customers. The company partners with its customers to provide design and development services which accelerate speed to market of innovative products and then works with its customers to deploy advanced automated assembly and quality control technologies which reduce manufacturing cost while improving quality. The company's core advantage is the knowledge of its people to integrate design, molding, and automation to drive low cost and high quality manufacturing solutions.

Phillips-Medisize Corporation is headquartered in Hudson, WI, and employs over 3,800 people in 15 production locations throughout the United States, Europe, Mexico and China. The company also has design centers in Hudson, WI; Mountain View, CA; Hillegom, Netherlands; Struer, Denmark; Cambridge, United Kingdom; and Suzhou, China.
