

ENGINEERING MEDICAL DEVICE KNOWLEDGE

Design, develop and manufacture custom medical device components and finished devices

Continuous glucose monitors (CGMs) and applicators

Electrophysiology catheters and systems

Insulin patch pumps and traditional insulin pumps

Intravascular ultrasound system (IVUS) catheters and consoles

Automated external defibrillators (AEDs) and wearable defibrillators

Robotic surgical systems and accessories

In addition to our core injection molding and assembly capabilities, we offer our medical device customers:

- Medical contract manufacturing of complex assemblies with integration of molded and electronic components
- Complex interconnect assemblies with custom connectors, including embedded electronics
- Platform connectors to support medical device applications
- Fiber-optics solutions, including optical connectivity, silica fiber assemblies, linear fiber and capillary tubing
- Electronics integration and assembly

For our medical device customers, we offer both CDMO services under the Phillips Medisize brand and electronic connectivity products under the brand of our parent company, Molex.
