

# DRUG DELIVERY SOLUTIONS

Providing leading pharmaceutical and biotech companies with end-to-end drug delivery solutions

## PLATFORM SYSTEMS

## BESPOKE SOLUTIONS

## CONNECTIVITY

## DESIGN AND DEVELOPMENT CAPABILITIES

### Design, development, and manufacturing tailored to your needs

A collaboration with Phillips-Medisize focuses on reducing risk, maximizing investment returns and achieving launch timelines within the complexity of the drug delivery process. Tailored to your unique design, development and manufacturing needs, we offer a complete range of capabilities, services and expertise:

#### Device strategy

#### Front end innovation

#### Human Centered Design, including HFE/UE

#### Mechanical, electrical, and materials engineering

#### Design assurance/DHF support

#### Test engineering & DVT execution

#### Scalable tooling and assembly expertise

#### Connected Health Solutions

## MANUFACTURING CAPABILITIES

### We work with you to define an integrated manufacturing strategy that ensures market launch readiness

From leading capabilities in precision plastic injection molding, device end-assembly and final packaging for combination products through to device connectivity, we offer the benefits of a single, trusted integrated solution at every phase of product lifecycle. Depending on your need, we can manage anything from hand assembled devices to fully automated robotics setups for the assembly of your device. Complex, precision injection molding capabilities, providing customized, high-quality deliverables:

#### Injection, inhalation, ophthalmic, and transdermal expertise

#### Mechanical and mechatronic devices

#### Process technologies and scalable manufacturing

#### FDA-registered production sites

## INNOVATING CAPABILITIES

### Let us collaborate on design, development, and manufacturing of your life-changing innovative drug delivery product

Industry-leading product innovation is key to a fast realization on a commercial scale. Product realization is highly unpredictable journey, but we have the innovation expertise to help you navigate the complex challenges and succeed – quickly and efficiently.

### Technology Accelerators

- We develop therapy-specific features, functions and design on top of our underlying technology for each new application
- This ensures that the technology caters to individual patient needs and the unique characteristics of each drug, reduces project risk and accelerates your product to market

### Connected Health

- We were the first to deliver an FDA-approved connected health system to the market
- Our connectivity hardware and software solutions enable you to develop connected combination devices and digital interfaces for improved disease management and outcomes

We cover all the steps – from an idea on paper to a complex regulated drug delivery service

We give you a head start and reduce risk to your drug delivery device projects

We help clients bring their products to market utilizing connected health systems

PHARMA  
INNOVATION  
AWARDS

Best Innovation in Drug Delivery, Pharmapack Awards 2019

Best Overall Connected Health Solution, Breakthrough Award 2019

Excellence in Pharma Drug Delivery Devices, CPhi Pharma Awards
