OPTIMIZING THE PATH FOR INNOVATIVE IVD DEVICES FROM CONCEPT TO COMMERCIAL MANUFACTURING

As Diagnostic companies increasingly invest in promising applications, Phillips-Medisize has the capabilities and experience to help address technical and manufacturing challenges for each step of the way, from concept to prototype, pilot to scale manufacturing with:

- Mature ISO 13485-compliant and FDA certifications
- An integrated DfX manufacturing strategy, reducing risk, reducing cost, increasing robustness and throughput from inception
- Complex, precision injection molding, welding, sealing and electronic manufacturing capabilities in ISO 7 & ISO 8 cleanrooms, providing a one-stop-shop manufacturing solution
- Reagent and diagnostic substance handling solutions including spotting, assuring reagent stability and functionality
- Integration of miniaturized electronics, specialty optics components and final device testing, supporting full device assembly
- Tailored final packaging options, including management of UDI and serialization, creating additional value chain efficiencies

Our global footprint and resources help customers develop and scale new products quickly from anywhere in the world.

ISO 9001 • ISO 13485
